Shorrock Trichem

Service Range

- 005 *Pest Repel and Pest Repel Premier*
- 006 *Pest Proofing Services*
- 007 *Bird Proofing Services*
- 009 *Flying insect Control Systems*
- 011 *Specialist Cleaning Services*
- 012 *Pest Risk Assessment Inspections*

Pest Repel

004

Pest Repel and Pest Repel Premier

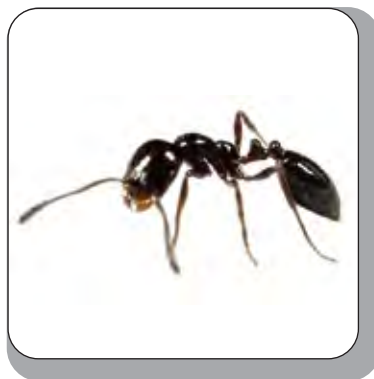

Our Pest Repel and Pest Repel Premier services operate an IPM system (Integrated Pest Management).

Overview

This means that we don't just look at the pest problem; we assess the environment in which it is occurring. We look at proofing, housekeeping, hygiene, food sources, breeding sites and how controlling or restricting these can help stop or control infestation. IPM ensures that there is minimum use of pesticides therefore reducing their impact on the environment.

Pest Solutions UK's Pest Repel System offers peace of mind that only regular monitoring and consistent high quality servicing can bring. By undertaking regular pest control inspections, our Technicians will identify and eliminate pest risks long before they pose any significant threat to your business or its reputation.

Whether it be offices, heavy industry, the retail sector or residential. We can tailor make the service or treatment to suit your businesses individual requirements and budget.

Pest Proofing Services

Prevent pests from getting in with our pest proofing services

Overview

Perhaps the most important factor in controlling pests is preventing or restricting their access into buildings.

Pest Solutions UK will undertake risk assessment surveys in order to highlight areas at risk of pest infestation.

A detailed report will then be provided which will indicate the appropriate method of proofing that is required to prevent pest ingress.

Whether it be Insect Screens, Strip Curtain Doors, Nylon Bristle Strip or other minor proofing of building fabrics; Pest Solutions UK are able to supply, install and guarantee the required work.

Bird Proofing Services

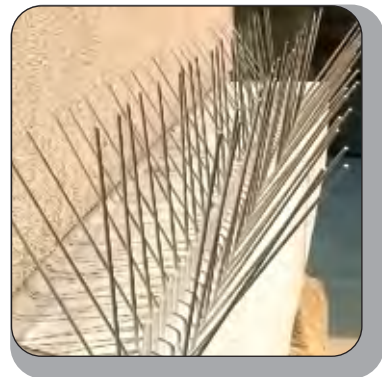

Industrial & commercial specialists in all forms of feral bird control.

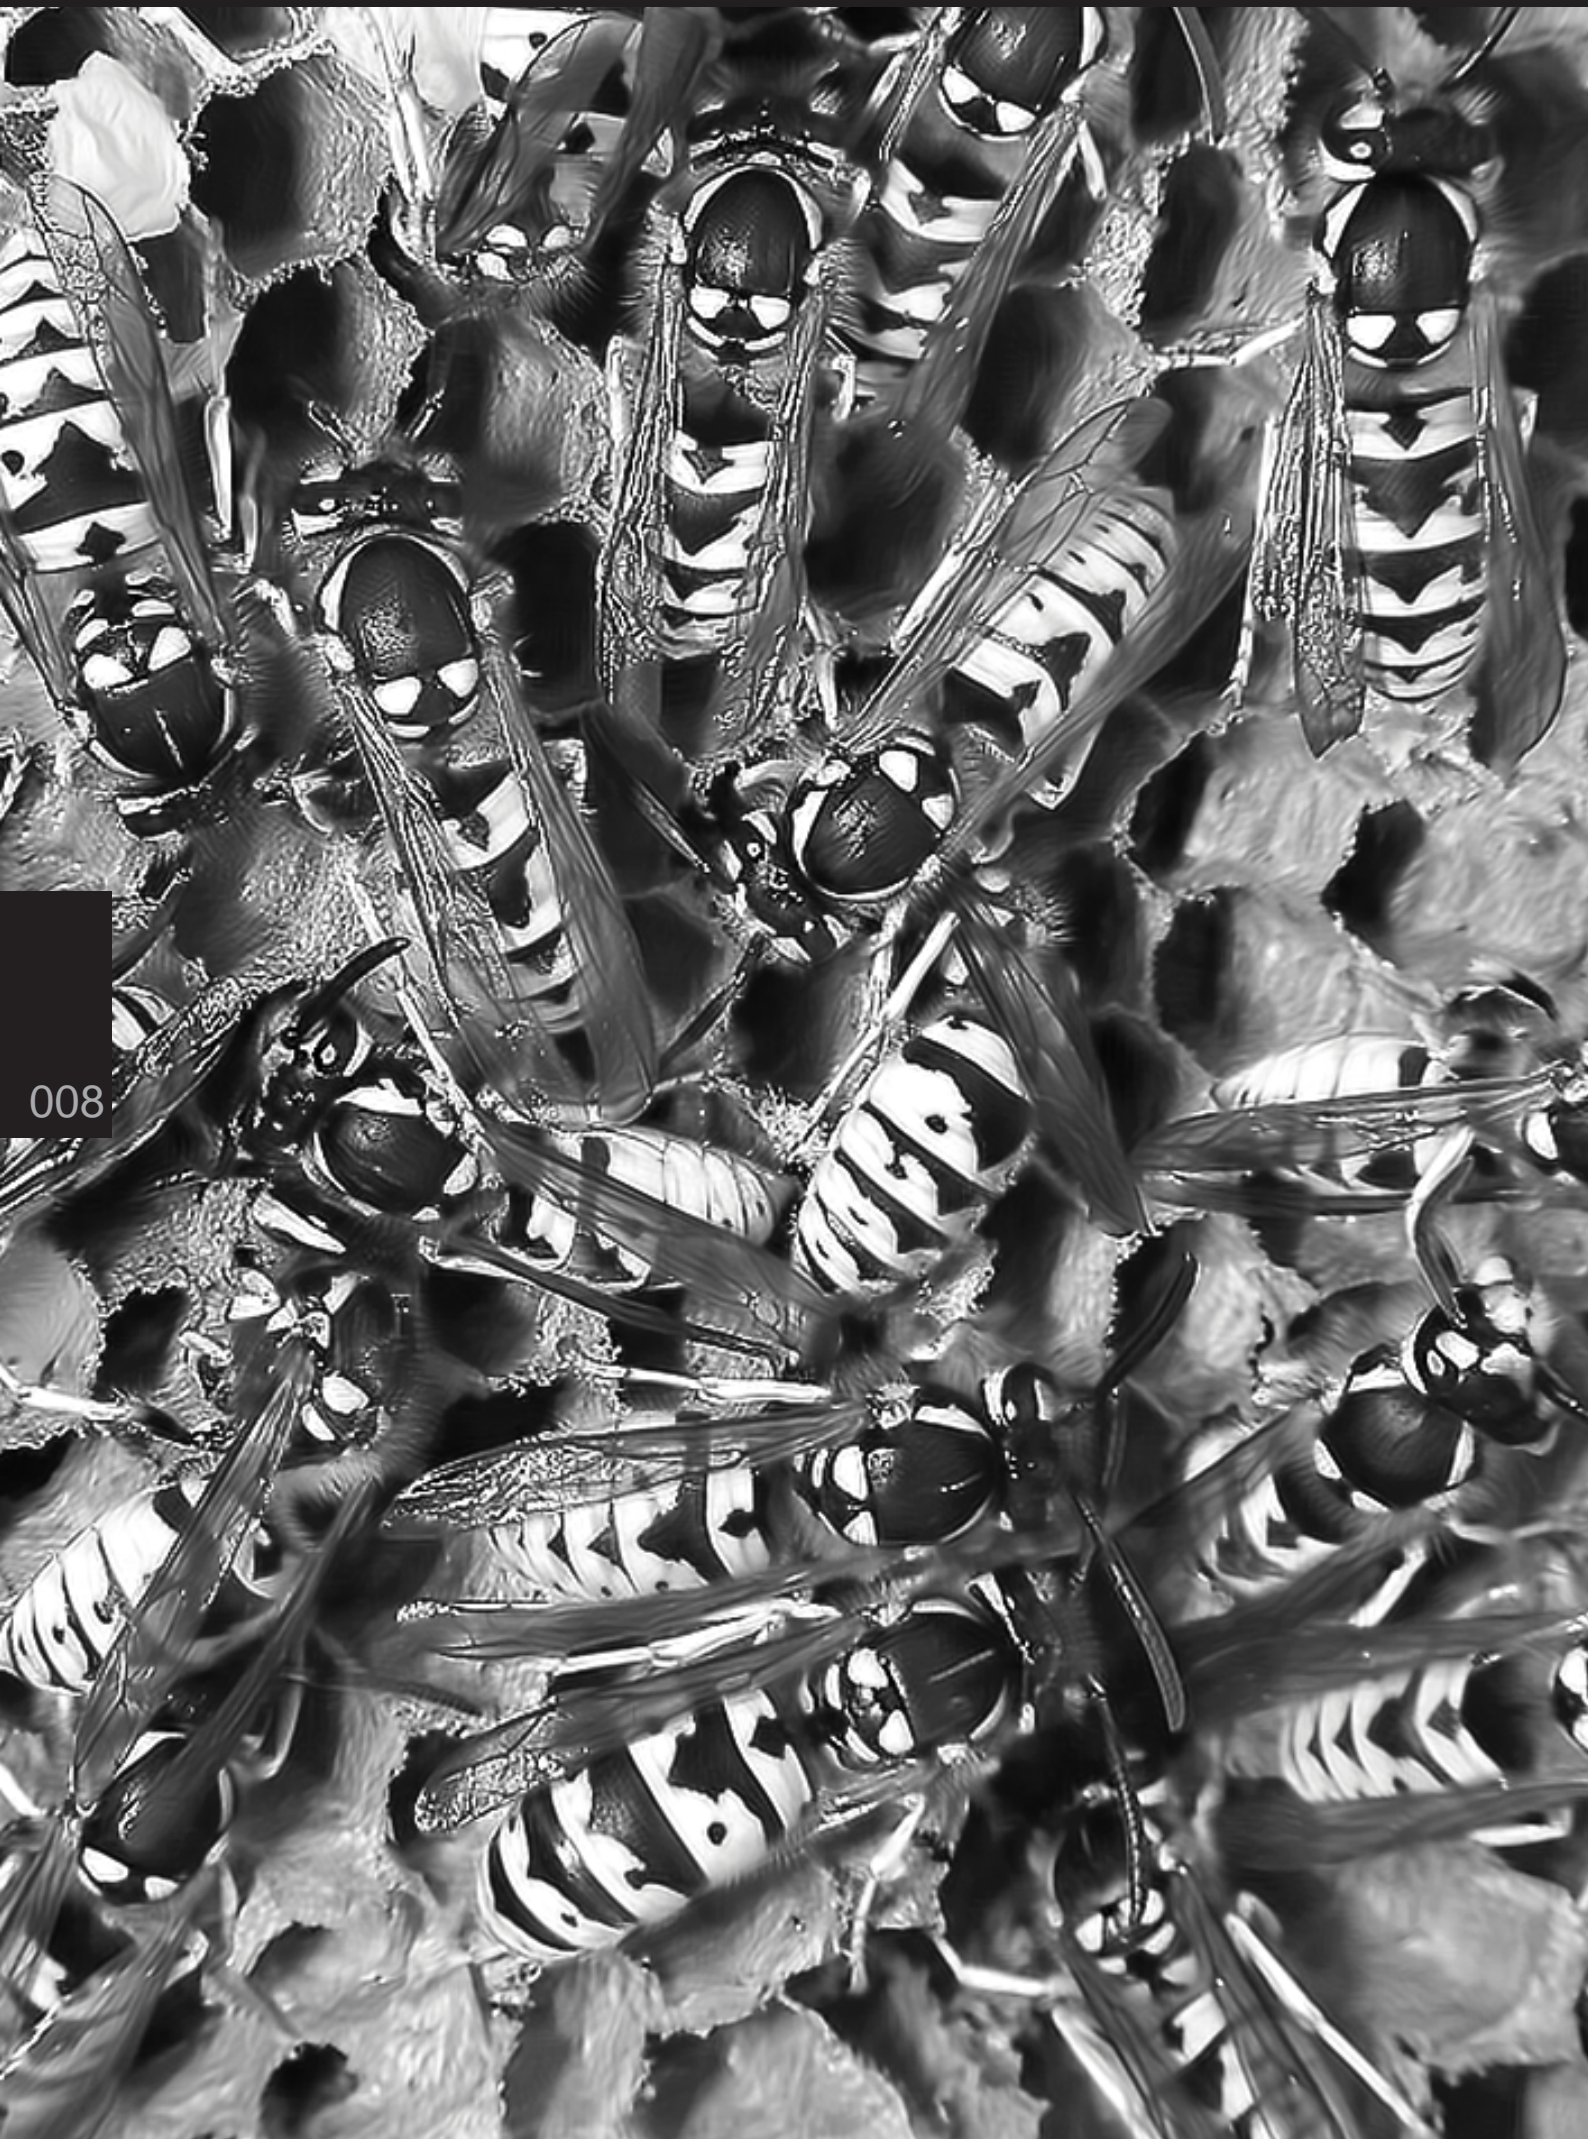

Overview

It is a fact that Pest Birds carry more life threatening diseases than rats. Their droppings and nesting materials harbour bacteria whilst also playing host to a wide variety of insect species such as Fleas, Mites, Beetles, Lice etc.

In order to help restrict pest bird activity, Pest Solutions UK can supply, install, maintain and guarantee a range of effective, unobtrusive and humane systems which are specifically designed to safeguard buildings and working environments.

These include bird netting and other anti-perch devises such as spikes and wire systems.

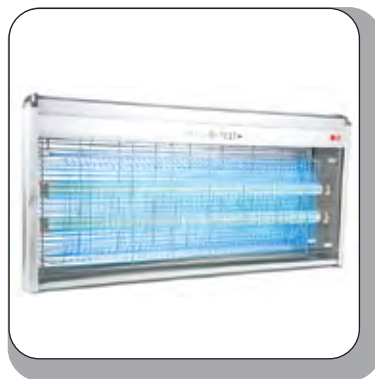

Flying Insect Control

Overview

Pest Solutions UK are able to supply and maintain a wide range of industry leading Fly Control Units. Whether there is a requirement for fly encapsulation, or the more traditional electronic grid unit, each situation will be assessed in advance to ensure effective long-term control.

Our encapsulations units are slim and easy to maintain. With no killing grid they are silent, discreet, hygienic and environmentally friendly and will catch all sizes of insects including smaller species such as Fruit Flies. The units come in various sizes and models to suit the particular environment and take into consideration discretion and aesthetics.

All fly control units require regular servicing to remain effective. Pest Solutions UK offer the service and maintenance programmes as part of our Pest Repel System. This can also include catchment tray analysis where auditory requirements stipulate.

Specialist Cleaning Services

010

Specialist Cleaning Services

Overview

There are several serious health and safety concerns related to bird droppings and associated waste which are categorised as follows:

- Organisms developing in birds and passed to humans, e.g. Ornithosis. This organism is found in the bird gut, infection from the gut, nasal and eye secretion contaminates fouling, feathers and nesting material which can survive many months in dry dust and droppings. Disease transmission to humans is caused through inhaling the contaminated dust or coming into contact with airborne spores.
- Organisms feeding or growing in birds nests such as Flies, Lice, Fleas, Insect ticks or Mites. Also fungi that can cause severe and sometimes fatal lung tissue infections.
- Organisms picked up and spread by bird's e.g. Salmonella and other diseases from contaminated foods, sewage plants, and agricultural sites.

Pest Solutions UK's technicians will disinfect and treat fouling with Insecticide and Biocide prior to removal, reducing the risk of disease transmission and secondary infestation from bird related insects.

All Pesticides used in the control/treatment of fouling are selective and applied to ensure public safety. Method statements & risk assessments will be completed before any work commences.

For further details about internal and external cleaning and disinfection, or to book a free survey please enquire online at: www.shorrocktrichem.com/pest-control or contact us at our office on: 01942 872 137

All members of our bird work team are mobile platform IPAF accredited and trained.

Pest Risk Assessment Inspections

Overview

Many businesses employ pest control companies to carry out preventative pest control services. These services can be left to run for many years without any policing or being audited. This could potentially lead to a number of problems:

- Missed site visits
- Old outdated techniques or materials
- Missed pest infestation
- Poor reporting of housekeeping, proofing or stacking problems

This can not only lead to potential infestation; but could also end up costing your business money.

Pest Solutions UK offer a free independent site survey. This will audit your current supplier's service and reporting, whilst also providing an up to date assessment of the quality. This will be followed up by a written report and corrective actions / recommendations where required.
